

**CS110 · ACTION 6A · REQUIRED WORKSHEET**

# C# Code Map

Label what the tutorial code does before you change what it says.

## 01 Run the tutorial first.

Follow [Ready to Code Some C# NET](#) in Visual Studio. When the app runs, use this sheet to name the parts. Your final pathway app may replace or extend “Hello World.”

### Selected context

Use a technical context · Console Status Check

## 02 Find the parts.

**Visual Studio note:** A newer Console App may use top-level statements, which means the compiler supplies the Program class and Main method. Label the parts you can see and write “compiler supplies it” for hidden parts.

```
using System;

class Program
{
    static void Main()
    {
        Console.WriteLine("What is your name?");
        string userName = Console.ReadLine();
        Console.WriteLine("Hello, " + userName);
    }
}
```

| Library | Class | Main method | Prompt | Input + variable | Output |
|---------|-------|-------------|--------|------------------|--------|
|---------|-------|-------------|--------|------------------|--------|

## 03 Explain each label in your own words.

### **Class**

A container that groups related code.

Class programing the main structure.

### **Main method**

The method where the console program begins.

Where it starts of the actual program.

### **Method / function**

A named action. In C#, a function inside a class is called a method.

One method is using WriteLine in order.

### **Variable**

A named place that remembers a value.

userName.

### **Console.WriteLine**

Displays a line of text in the console.

What is your Name?

### **Console.ReadLine**

Waits for typed input and returns that text.

The user's username

## 04 Trace the data.

### INPUT

Learned name

### VARIABLE

Stored in userName as a string.

### OUTPUT

Displays Hello, Name (or  
[System Status: Normal] -  
User: Name).

## o5 Plan your pathway version.

**What will you replace or add after the tutorial app works?**

Prompt: "System Check: Enter operator ID or system name:"

Stored Value: string operatorID = Console.ReadLine();

Response: C#

### Optional ways to go beyond the tutorial

- ☐ Another prompt    ☐ A decision or conditional    ☒ ASCII art in the console
- ☐ An image in README.md    ☐ Another tested feature

## o6 Save the evidence.

1. Complete every written section.
2. Select **Print or save PDF**, or take clear screenshots.
3. Place the PDF or screenshots in your GitHub Week6/evidence folder.
4. Commit and push the worksheet with your Action 6A project checkpoint.
